

WASTE MANAGEMENT GUIDE

All ships visiting the Port of Rauma must follow the instructions given in this guide. The guide does not apply to ships that are exempted from the mandatory delivery of ship-generated waste (proof of exemption must be presented to the port). Ships are charged a waste fee in accordance with the port's price list, regardless of whether the ship leaves ship-generated waste in the port or not.

Ships must leave all ship-generated waste and cargo residues at port reception facilities in accordance with the discharge provisions based on MARPOL 73/78. An advance notification of waste delivery must be given by ships through the PortNet system at least 24 hours before arrival to the port. If the travel time is less than 24 hours, the notification should be given immediately after leaving the previous port. The waste notification should also be sent to the Port Control by e-mail, so that a pick-up service can be ordered in advance for wastes for which there is no fixed waste reception facilities in the port.

FIXED WASTE RECEPTION FACILITIES

There are 17 waste stations located near the docks in the port area (see map). Sorted garbage can be delivered to the waste containers as follows:

- metal waste
- glass packages
- plastic packages
- oily rags
- energy waste (incl. paper & cardboard)
- burnable municipal waste (other waste)

The waste containers have labels indicating which waste the container is intended for. There are also sorting instructions in Finnish and English at each waste station.

INFORMING ABOUT DEFECTS IN WASTE RECEPTION

Contact the Port Control if you notice any defects in the port's waste reception facilities or procedures.

MOBILE WASTE RECEPTION FACILITIES (ORDERED)

Biowaste

Biowaste is food waste and other organic waste from ships sailing within the European Union. The Port Control orders a pick-up service for the biowaste from the service provider.

International catering waste (category 1)

Category 1 food waste is catering waste from ships arriving from outside the European Union, which includes food scraps and packaging that has been in contact with the food. The Port Control orders a pick-up service for the food waste from the service provider.

Hazardous waste & WEEE

Includes liquid and solid hazardous wastes such as solvents, adhesives, paints, batteries, and waste from electrical and electronic equipment (WEEE). The Port Control orders a pick-up service for the waste from the service provider.

Oily liquid wastes

Oily liquid wastes include sludge, bilgewater and other oily waters. The Port Control orders a pick-up service for oily liquid wastes from the service provider.

Sewage

In the Port of Rauma there is no direct connection to the sewer network from the docks. The Port Control orders a pick-up service for sewage from the service provider.

The port does not have its own reception system for:

- ballast water from tankers & tank washing waters
- Exhaust gas purification waste
- IMDG/ADR/RID code cargo wastes
